INTRODUCTION

Anytime you perform "surgery" on your laptop, you always want to make sure you're not connected to power. Even though you can unplug your laptop from the wall, you should always make sure to remove the battery, too.

Step 1 — Battery

- After shutting down your laptop, turn your laptop over and click the left tab left, then pull the right tab right as you pull the battery out.

 This step should always be done before working on your laptop to minimize electrostatic shock.

To reassemble your device, follow these instructions in reverse order.
